

RCOVR™ — Investor One-Pager

What It Is

RCOVR™ is a premium, foldable full-body recovery system that integrates automated spinal massage & decompression, therapeutic heat, PEMF therapy, and full-leg compression into a single compact platform designed for home use. It can replace bulky, expensive massage chairs while requiring a fraction of the space.

The Problem

The recovery market is fragmented. Consumers stack massage guns, compression boots, infrared mats, and bulky massage chairs to approximate full recovery. Existing all-in-one solutions are expensive, permanent furniture pieces incompatible with modern living spaces.

The Solution

RCOVR consolidates multiple recovery modalities into one foldable system that delivers professional-grade recovery without permanent footprint. The mat is used on a bed or floor and folds away for under-bed or closet storage when not in use.

Core Modalities

- Automated rolling spinal massage & decompression
- Therapeutic heat (infrared-style activation)
- Integrated PEMF (pulsed electromagnetic field) therapy
- Integrated pneumatic leg compression boots
- Optional carry/storage bag and optional comfort base

Market Validation

Entry products such as Chirp validate demand for at-home spinal decompression but remain limited in scope. Premium massage chairs and thermal beds validate willingness to pay but require permanent space. Infrared/PEMF mats lack mechanical intervention. RCOVR occupies the premium middle ground.

Target Customer

Athletes, golfers, and active professionals (30–55) with high discretionary spend and existing recovery adoption. Secondary users include active older adults who self-select without senior-specific positioning.

Business Model

Direct-to-consumer launch with a hero SKU priced around \$1,999. High AOV justified by replacing multiple devices and eliminating the need for a bulky massage chair. Accessory upsell opportunities include base, carry bag, and future modules.

Brand & Moat

RCOVR™ is positioned as an American, tech-wellness brand. Its primary moat is form-factor: full-body recovery delivered in a foldable, space-efficient system competitors cannot easily replicate.

Positioning

“Full-body recovery — massage, heat, PEMF, and compression — in one foldable system that replaces bulky massage chairs.”
